

BAI WANG YEK

Front end web developer | UI/ UX Designer

PROFILE

I am a self taught front end web developer and UI/ UX designer. I have a passion for both the logic side of programming and the creative and usability side of design. I believe that they are like fish and chips, where they are equally as important to be successful in the digital world.

EDUCATION

2012-2015

University of Auckland

BSc Chemistry

WORK EXPERIENCE

June 2017 - September 2017

Digital Arts Network Auckland

Junior Experience Designer (3 months contract)

- worked together with a Senior Experience Designer to redesign the entire website for an international telecommunication company based on the style guide provided by their main HQ while keeping most of the original IA and main content. We managed to finish this project ahead of time and the client was all praise with the result.
- code and built a prototype website for a brand refresh using Nunjucks, SASS, Javascript, Node.js and Gulp.js. Agile methodology was used for this project and there was a strong collaboration between me and the designers.
- designed, built and deployed a single webpage to promote a new service feature. The page was built from an existing HTML template but it was heavily customised to fit the company's brand and content.
- updated and tidied up the sketch files of an existing project from another designer and created a style guide from that. I used the symbols feature extensively to future proof the file for the client.

TECHNOLOGIES

HTML5	SASS	Firebase
CSS3	JQuery	AWS
Javascript	Github	MongoDB
Node.js	Socket.io	Sketch app
Nunjucks	Google App Engine	Axure
